Four ways to use Flutter today

Start a new app from scratch

Build your new idea in Flutter, and reach both iOS and Android at the same time.

Prototype a new app idea

Use Flutter to test out an app concept or idea in record time.

Bring your app to the the *other* platform

You already have an iOS or Android app? Use Flutter to build for the other platform. Combine codebases when you've proven your Flutter app.

Use Flutter for a part of your app

Test Flutter in production with one or two screens in your existing app.
